

Alltech On-Farm Support and NC Dairy Extension present a webinar on

Reduce waste, create flow, increase value

with Dr. Jeffrey Bewley, a Lean Farming Master Trainer. He also brings years of practical experience working with dairy producers around the world.

Principles of lean manufacturing have been applied in multiple industries for decades. Recently, this concept has made its way into agriculture. **Lean** is a **production system and a management philosophy**, focused on creating more value with less resources. Progressive dairy operations have applied this concept to improve their organization processes and culture.

Lean thinking employs **5 key principles** toward identification of **8 types of waste**, both described below. Lean is an approach toward viewing the dairy farm as a complete system.
